- ▶ If  $\psi$  is unsat, we might get  $\emptyset$  before reaching  $\text{Res}^*(\zeta)$ .
- ▶ If  $\psi$  is sat, then truth tables are faster : stop when some row evaluates to 1.

1. Prove using natural deduction

$$p \rightarrow (q \vee r \vee s), q \rightarrow (\neg p \vee \neg s), (r \vee s) \rightarrow q \vdash \neg p \vee \neg s$$

You cannot use LEM directly or indirectly (that is, proving LEM)

2. Is this formula satisfiable? Check using HornSAT.

$$\begin{aligned} & \neg q \wedge (\neg p \vee \neg r \vee s) \wedge (\neg p \vee \neg s \vee t) \wedge (\neg r \vee \neg t \vee q) \wedge p \wedge \\ & (\neg s \vee \neg t \vee r) \wedge (\neg r \vee \neg s \vee \neg t) \wedge (\neg p \vee r) \end{aligned}$$
